

SPSE Jecna Test Case

Test Case ID: 1

Test Designed by: Lukáš Dvořák

Test Name:

Connection to database

Brief description:

Test if the application is able to connect to the database

Pre-conditions: Downloaded zip file from GitHub https://github.com/Dvormen/Database_library_manager.git

Dependencies and Requirements:

Software: .NET Framework and Microsoft SQL Server

Hardware: Computer that is able to run the application and a database

Step	Test Steps	Test Data	Expected Result	Notes
1	Open Microsoft SQL server and open Export.sql.	Export.sql	The file is now opened.	If you are having any problems, there is READ.ME file on git
2	Run the Export.sql query.		New library should be created.	
3	Open appsetting.json file and enter in your database parameters	Your database parameters	Inserted correct data	Fill out the server, database, user id and password
4	Run the exe file.		Application works and is connected to the database.
